

Communication Objective

This document outlines how the team communicates and coordinates work on the HDI Prediction System throughout the internship project lifecycle.

Communication Channels

- Telegram — primary channel for daily updates and quick coordination.
- WhatsApp — used for informal discussion and file sharing among team members.
- GitHub — task tracking and code-level communication through commits and comments.
- Google Meet / Voice calls — used for scheduled discussions and issue resolution.

Meeting Cadence

- Daily quick check-in on task progress and blockers.
- Weekly review of completed milestones against the project plan.
- Ad-hoc calls whenever a technical blocker needs immediate discussion.

Status Reporting

- Each member updates task status (Done / Pending / Assigned) directly in the shared project plan.
- The Team Lead consolidates progress before each milestone review.
- Blockers are raised immediately in the group chat rather than waiting for the next meeting.

Escalation Path

If a task is blocked for more than a day, it is escalated to the Team Lead, who either reassigns support from another member or adjusts the timeline to keep the overall project plan on track.
