

Project Demo Planning

HDI Prediction System — Project Demonstration Phase

Demo Logistics

This plan covers the preparation and execution details for demonstrating the HDI Prediction System to reviewers as part of the SmartBridge internship submission.

Demo Plan Overview

Aspect	Details
Presenter Order	Farzana Shaik (intro & demo), team members (Q&A support)
Duration	5–7 minutes including a brief Q&A
Environment	Deployed Render.com link, tested on mobile and desktop browsers
Backup Plan	Local Flask server run as fallback if the live link is slow
Rehearsal	At least one full run-through before the actual demo session

Pre-Demo Checklist

- Confirm the Render.com deployment is live and responding.
- Prepare 2–3 sample input sets with known, sensible HDI ranges.
- Clear browser cache/history to avoid stale form data during the demo.
- Keep the GitHub repository open in a second tab in case code is asked for.

Anticipated Questions

- Why Linear Regression instead of a more complex model? — Strong fit (R^2 approx. 0.98) with better interpretability.
- How was the dataset sourced? — 2021 global HDI indicators for approximately 195 countries.
- How is the model kept up to date? — Can be retrained as new yearly HDI data becomes available.
